

The new **Electronic** instant hot water boiler model has a separate element and thermostat for ease of maintenance and control. The Electronic Temperature controller gives improved accuracy and even greater reliability.

Normally the controller is set to 95° C for instant hot water for tea and coffee, however we now have the ability to alter the pre-set temperatures from 40° to 97° C.

For example for installation at high altitude such as a Ski Field café we can reset the temperature specifically for the altitude (e.g. 88°C).

Still available in two, five and ten litre models, we have now added a twenty-five litre unit suitable for large commercial applications.

Replacement parts are interchangeable between most models except for the element.

We stock all parts for all models, including the original models and the electronic models, ready to courier straight away. See price list for replacement parts.

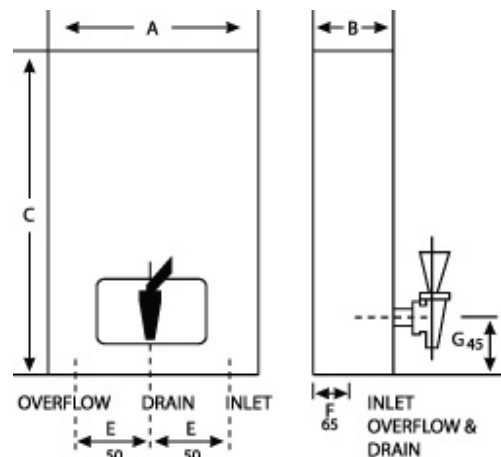

Model No.	BU02E	BU05E	BU10E	BU25E
Capacity (litres)	2	5	10	25
Initial draw off (200ml cups)	10	25	50	125
Delivery (cups first hour)	130	145	170	305
A width (mm)	307	307	307	390
B Depth (mm)	130	130	175	260
C Height (mm)	350	550	640	700
Element size (kw)	2.2/2.4	2.2/2.4	2.2/2.4	3.6
Electrical Supply 2m Power Cord (C)	✓	✓	✓	Hardwired

*Extra hot out standard for 25 litre, optional extra for 5 and 10 litre units*

Note: 1 cup = 200mls. Supply pressure below 200kpa will reduce delivery below capacity stated above.

### Electrical Supply

Voltage rating 230-240 AC, single phase power cord supplied with the 2, 5 and 10 litre sizes. 25 Litre unit to be hardwired.
